

MOST EFFECTIVE PERFORMANCE GOALS FOR A DATA SCIENCE EMPLOYEE

MOHSIN

SWIPE RIGHT

Data Quality

Data quality is the foundation of any Data Science project. You need to ensure that the data you collect, process, and analyze is accurate, complete, consistent, and relevant

MOHSIN

SWIPE RIGHT

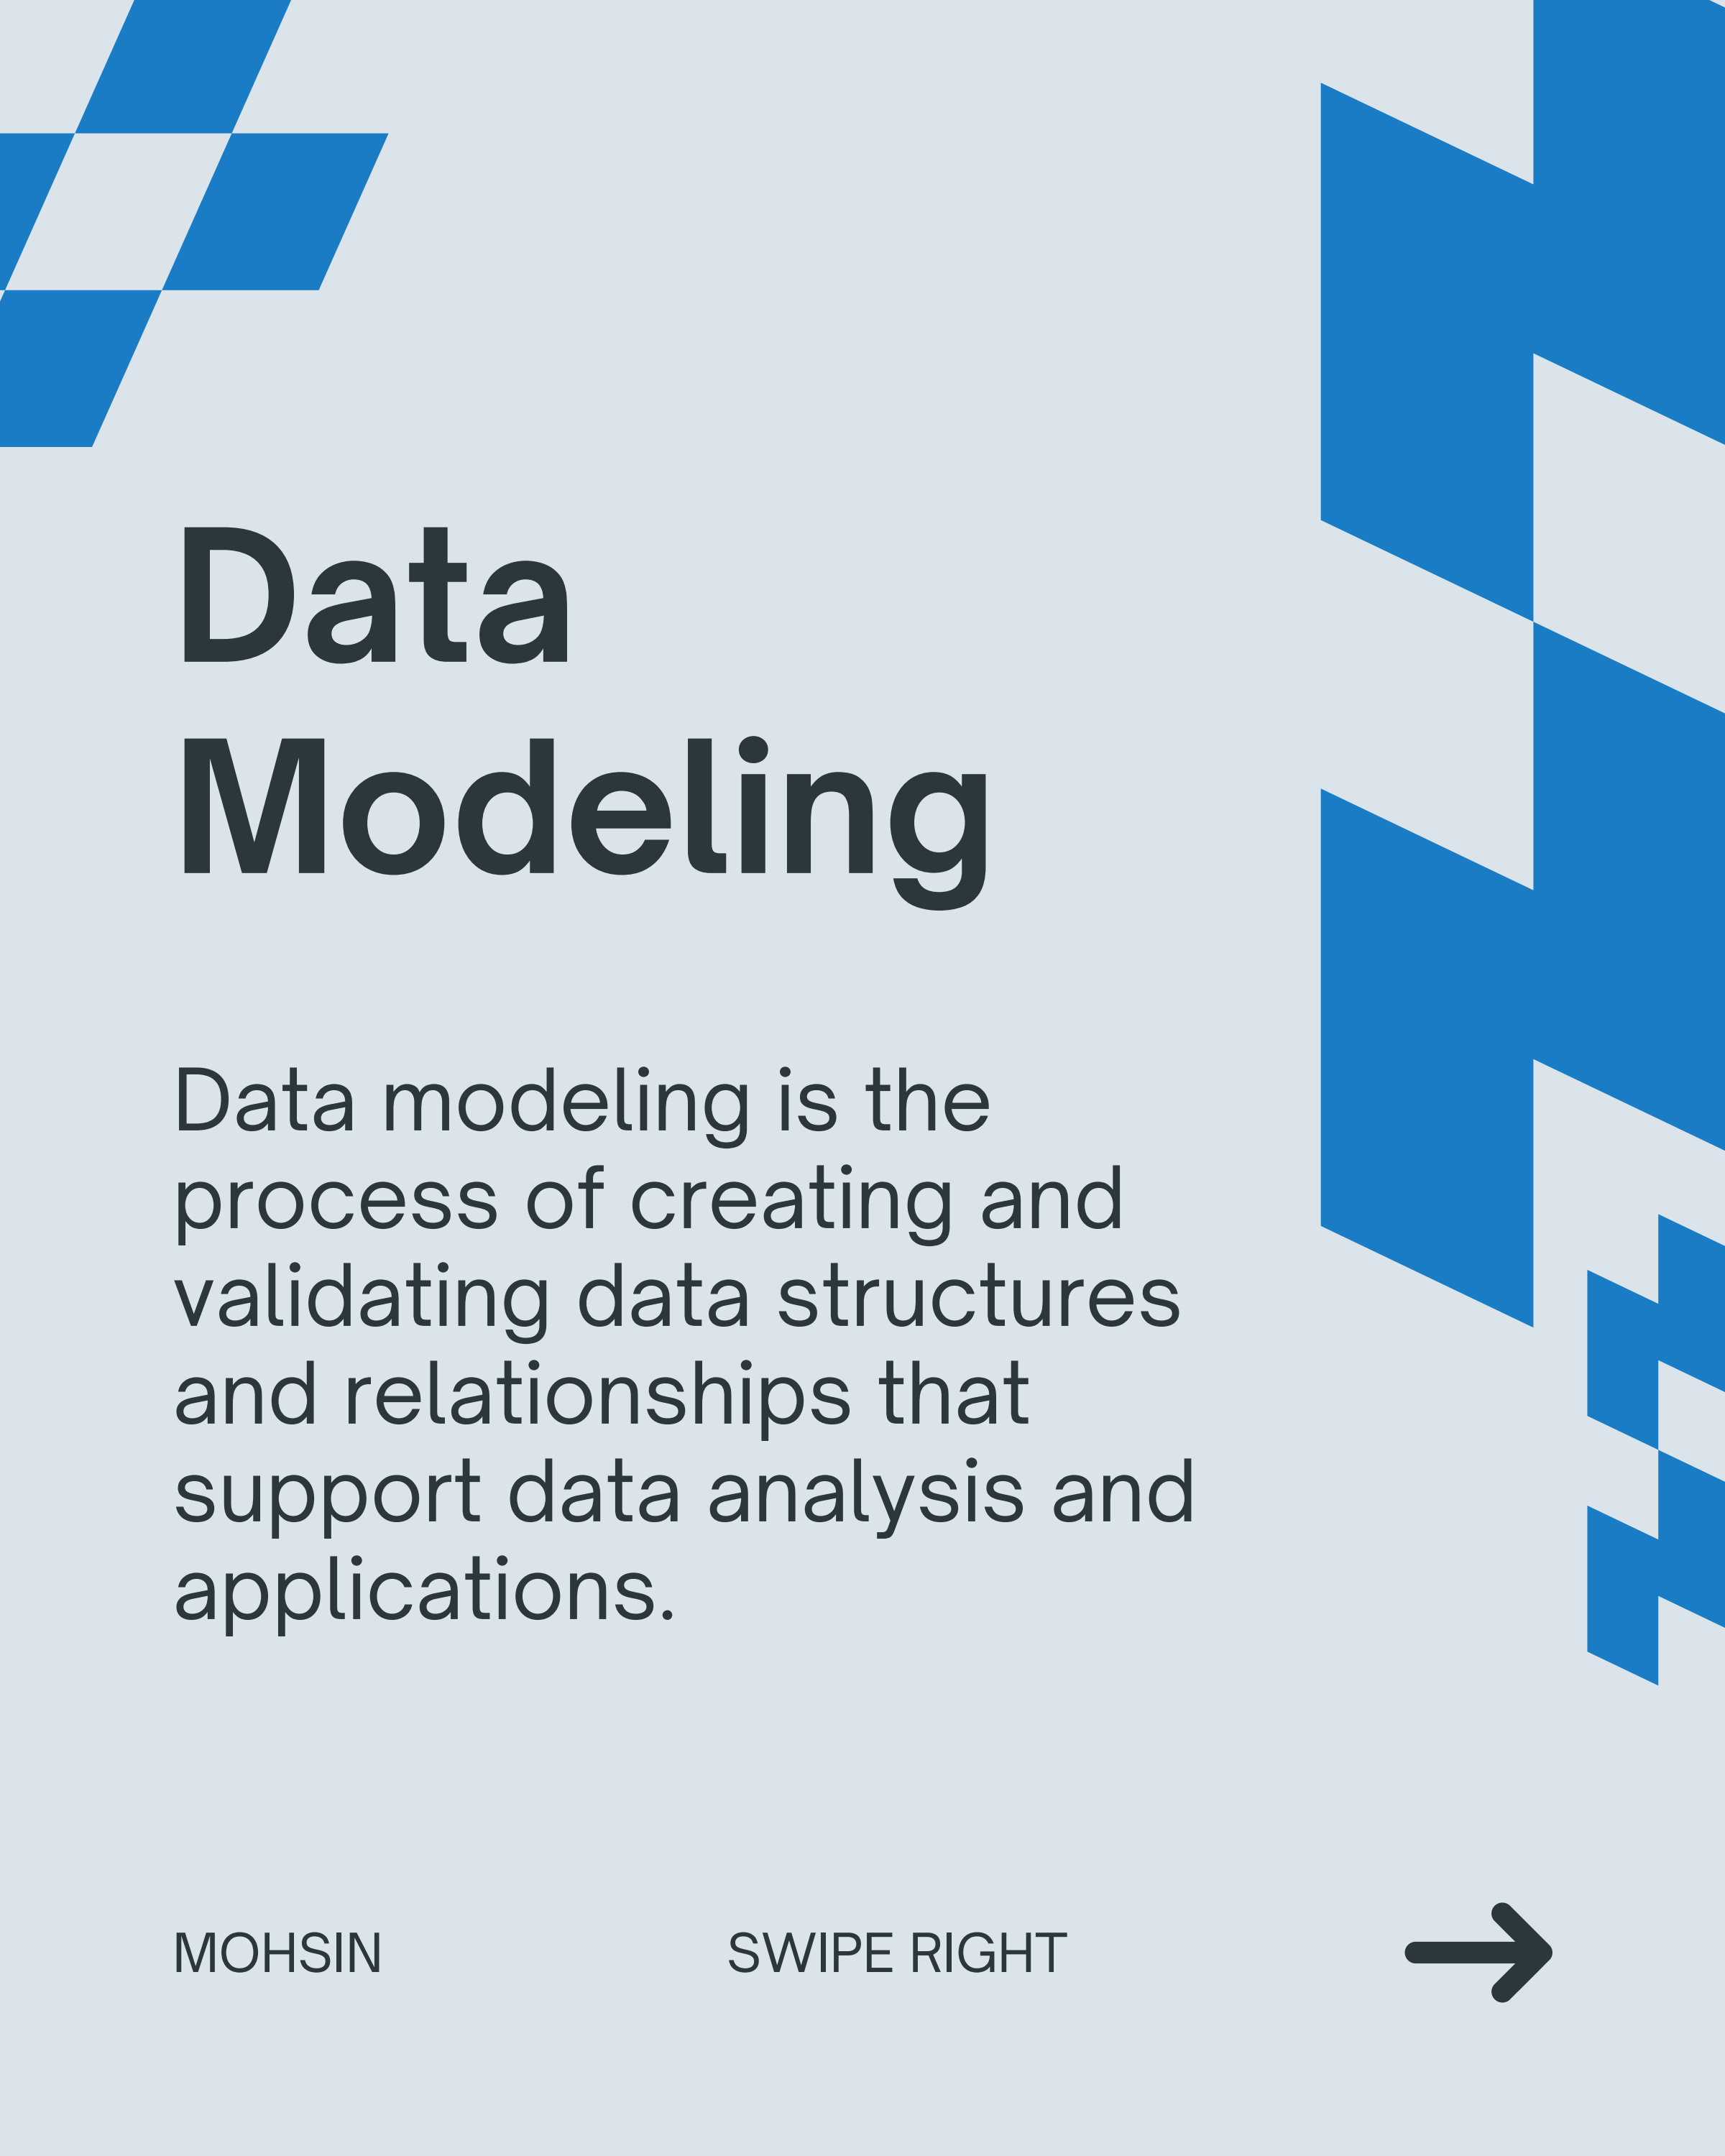

Data Analysis

Data analysis is the core of Data Science. You need to apply appropriate methods and tools to explore, visualize, and interpret data, and generate insights and recommendations.

MOHSIN

SWIPE RIGHT

Data Modeling

Data modeling is the process of creating and validating data structures and relationships that support data analysis and applications.

MOHSIN

SWIPE RIGHT

Data Engineering

Data engineering is the discipline of building and maintaining data infrastructure and systems that enable data analysis and applications

MOHSIN

SWIPE RIGHT

Data Science Projects

Data Science projects are the tangible outcomes of your data analysis and applications. You need to deliver data science projects that meet the expectations and requirements of your stakeholders and customers

MOHSIN

SWIPE RIGHT

Data Science Skills

Data Science skills are the competencies and abilities that you need to perform your data science tasks and roles. You need to constantly update and enhance your data science skills to keep up with the evolving data landscape and demands
